A-Prostine

Box containing 90 capsules

Capsules to prevent and reduce the hypertrophy of the prostate as well as the inflammations and the embarrassments, which results from it.

Hypertrophy of the Prostate:

The Prostate is a small sexual gland surrounding, the urethra or (canal urinary) on its upper section. As long as it is healthy, its volume does not obstruct the passage of urine, and then all is fine. Things become complicated, when its volume increases and compresses the urethra.

About two thirds of the men aged 50 and above, and 80% of the men over 70 years old are concerned and experience some the major disadvantages. One can thus classify the adenoma or hypertrophies of the Prostate among the disorders related to ageing.

However, much of to people seemingly want to ignore these facts and undoubtedly this negligence could be responsible for the frequency of the problem. From the very first symptoms, it is advisable to initiate a preventive herbal medicine cure, especially for the people whose family has shown a hereditary disposition for this condition.

Related symptoms:

More frequent and pressing need to urinate, painful urination, the need to push in order to urinate, weak urine stream, but also incontinence.

The level of PSA (Prostate Specific Antigen) is a specific indicator of the status of prostate. A high level of PSA may indicate:

- a simple adenoma of the prostate which, although uncomfortable, is not dangerous
- or of the presence of a malignant tumour

It is therefore advisable to consult your physician to know your level of PSA and to carry out complementary examinations in order to avoid if possible the diagnosis of cancer.

Embarrassments caused by the adenoma of the Prostate:

The hypertrophy or adenoma of the Prostate will make urinating a painful episode, due to the compression of the urethra. The adenoma can involve complications like the

dilation of the bladder, a renal insufficiency or lithiasis (presence of stones) in the urinary tract. The bladder being poorly drained will dilate, which can cause urinary infections. Moreover, the adenoma can be at the origin of the presence of blood in the urine (haematuria).

In addition to this, the hypertrophy may cause an erectile dysfunction and leading into an impotence.

Action of A-Prostine:

A-Prostine is composed of plants and natural substances. The action of this compound is multiple and aims at obtaining a progressive reduction in the volume of the Prostate by inhibiting the enzyme and hormones responsible for its hypertrophy.

In addition to this anti-androgen hormonal effect, A-Prostine exerts an anti-inflammatory action that acts as a decongestant. After three to six months of cure, it is advisable to ask for a medical analysis in order to check the PSA level.

Instructions:

Take a capsule at each meal (or three capsules per day). Once the targeted objectives have been reached (lower PSA level or regular size of the prostate), take one capsule per day as a maintenance and preventive treatment.

Composition:

Urtica dioica, Cupressus sempervirens, Emblica officinalis, Lepidium sativum, Trigonella foenum-graecum - Plant origin capsules.

Complementary treatment:

A depurative cure will always constitute an excellent basis to ensure the efficiency of almost any other targeted treatment. DynOrgan is a depurative that cleans vital organs and ensures the proper functioning and the stimulation of those organs (namely: the liver, spleen, pancreas, kidneys and gall-bladder) with the following objectives:

- Ensure efficient elimination of toxins
- Improve the overall metabolism and general condition of vital organs
- Moreover, for people undertaking a diet to lose weight,

DynOrgan will help and support the whole process of losing weight by stimulating the organs implied in the elimination.

In the precise case of problems related to the prostate, a cure of DynOrgan at a rate of 2 capsules after each meal (six capsules per day for 10 days) is advised for its depurative effect on the kidneys and to cleanse the urinary tract.
